17. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

This well was temporarily abandoned September 15, 1971 after production from the perforated interval 3540' to 3603' had declined below the economic limit to operate. The rods were pulled and the well abandoned with the valve in the top of the 2" tubing. This well has 7" casing at 2925' in the Loco Hills sand set with 30 sacks cement; 4 1/2" casing is set at 3640' TD with 125 sacks cement. The top of the cement is at 2100' between the 4 1/2" and 7" casing.

On or about October 20, 1974 we plan to plug and abandon the well as follows:

Run 2" tubing and circulate the hole with heavy mud and spot 20 sacks cement from 3300' to 3150'. The top of the San Andres is at 3260'. 25 sacks, 100' plug at top of 4 1/2" stub at about 2100'; 35 sacks, 100' plug at surface.

Above procedure as per telephone conversation with Mr. Beckman October 7, 1974.
