 ARTESIA, OFFICE

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

On August 15, 1983, the New Mexico Division of Oil Conservation was notified that a bradenhead water leak had developed between 5-9/16" casing and 8-5/8" surface casing. Initial volume was 250 barrels per day and this decreased to 60 barrels per day over a few days.

8-5/8" casing is cemented at 700' and cement circulated to the surface. 5-9/16" casing was cemented at 4,000' with 325 sacks of 50/50 class "C" cement and pozmix A with 2% Bentonite gel and 8# salt per sack.

It is proposed to cement the water flow by pumping 70 sacks class "C" cement + 95 sacks Halliburton light cement down between 8-5/8" and 5-9/16" casing strings. This is equivalent to 150% of volume to 700'.

Subsurface Safety Valve: Manu. and Type _____ Set @ _____ Ft.

18. I hereby certify that the foregoing is true and correct

SIGNED Ralph L. Gray TITLE Consultant DATE Aug. 19, 1983

 CONDITIONS OF APPROVAL, IF ANY:

Instructions

General: This form is designed for submitting proposals to perform certain well operations, and reports of such operations when completed, as indicated, on Federal and Indian lands pursuant to applicable Federal law and regulations, and, if approved or accepted by any State, on all lands in such State, pursuant to applicable State law and regulations. Any necessary special instructions concerning the use of this form and the number of copies to be submitted, particularly with regard to local, area, or regional procedures and practices, either are shown below or will be issued by, or may be obtained from, the local Federal and/or State office.

Item 4: If there are no applicable State requirements, locations on Federal or Indian land should be described in accordance with Federal requirements. Consult local State or Federal office for specific instructions.

Item 17: Proposals to abandon a well and subsequent reports of abandonment should include such special information as is required by local Federal and/or State offices. In addition, such proposals and reports should include reasons for the abandonment; data on any former or present productive zones, or other zones with present significant fluid contents not sealed off by cement or otherwise; depths (top and bottom) and method of placement of cement plugs; mud or other material placed below, between and above plugs; amount, size, method of parting of any casing, liner or tubing pulled and the depth to top of any left in the hole; method of closing top of well; and date well site conditioned for final inspection looking to approval of the abandonment.
