

- C. The reserve pits will be plastic lined.
 - D. The pad and pit area has been staked and flagged.
10. PLANS FOR RESTORATION OF THE SURFACE.
- A. After drilling and/or completion operations are finished, all equipment and other material not needed for further operations will be removed. Pits will be filled and the location cleaned of all trash and junk, so as to leave the wellsite in as aesthetically pleasing a condition as possible.
 - B. Any unguarded pits containing fluids will be fenced until they have been filled.
 - C. If the proposed well is non-productive, all rehabilitation and/or vegetation requirements of the Bureau of Land Management and the United States Geological Survey will be complied with and will be accomplished as expeditiously as possible. All pits will be filled and leveled within 90 days after abandonment.
11. OTHER INFORMATION.
- A. Topography: The proposed wellsite is located in an area of low, rolling sand hills.
 - B. The topsoil at the wellsite is moderately soft sand, with harder sand or clay beneath it.
 - C. Flora and Fauna: The vegetation cover at the wellsite is moderately sparse, consisting primarily of mesquite, broom weed, and other miscellaneous weeds and grass. The only wildlife observed were lizards and a few small birds, but the area is typical of semi-arid desert land and it is likely that other wildlife, such as rabbits, gophers, kangaroo rats, badgers, ground squirrels and snakes inhabit the proposed location. The area is used for cattle grazing.
 - D. There are no ponds, lakes, streams or rivers within a one-mile radius of the wellsite.
 - E. There are no houses or other buildings, or any windmills, within a 3-mile radius of the wellsite.
 - F. The wellsite is located on federally owned land surface, with federal control of minerals.
 - G. There is no evidence of any archeological, historical or cultural sites in the area.
