The elevation of the derrick floor above sea level is **3520** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill a 3300' Queen Formation rotary test and follow the below described casing and cementing program.

8-5/8" @ 200' w/50 wt.

5-1/2" @ 3300' w/150 wt.

Upon reaching total depth and cementing the 5-1/2" casing, a 50 sack plug will be set at the Top of the Salt Formation between the 5-1/2" casing and the formation with 1" tubing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
