PROP # 27557

POOL # 56439

Injection is to be through the five authorized water injection wells,
all of which will be multiple completions except the Shugart A Well
No. 3. This well will be a single completion, and injection shall
be down plastic-coated tubing set in a packer near the shoe. Injec-
tion into the multiply-completed wells shall be down tubing through
Paker flow valves into each of the zones being flooded. Packers
shall be used to separate the zones and a packer shall be installed
above the uppermost injection zone in each well. The casing-tubing
annulus in all of the wells shall be filled with an inert fluid and
left open or equipped with a pressure gauge to facilitate detection
of tubing or packer leaks.
