Will drill hole to approximately 10,500' or an estimated 300-400' in the Devonian formation for S.W.D. purposes. A DST in the top of the Devonian formation will be run to insure no hydrocarbons or commercial productivity in the anticipated disposal zone. If DST condemn the zone then 5 1/2" production string will be run to the top of the Devonian formation and cemented and an open hole disposal zone of the Devonian formation will be attempted.
