17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

The subject well was producing 40 MCFD during the first six months of 1988 when a decision was made to suspend production and shut the well in until the economic environment improved to a point that the subject well could be returned to production. A federal sundry notice was filed and recieved by the BLM on November 23, 1988 approving the suspension of production until the economic environment improved. It is the Operator's opinion that said well is capable of the production of gas in paying quantities.

The price of gas sold at the wellhead has not improved in the last three years and it is actually lower now than it was at it's 1988 level. The spot and future price for natural gas for September and October of 1991 indicate a significant upward spike in gas prices and Read & Stevens will be returning the well to production in the very near future.

Once the well is turned on and initial testing is complete, the feasibility of a plunger-lift installation on this particular well will be evaluated. Returning the well to production and initial testing should be completed within 30 days from date of this notice. The Carlsbad area office of the BLM will be contacted before testing operations on the well are conducted.
