Section 14-T19S-R25E  
660' FNL and 1980' FWL  
(Developmental Well)

APR 8 1980

U.S. GEOLOGICAL SURVEY  
ARTESIA, NEW MEXICO

This plan is submitted with Form 9-331C, Application for Permit to Drill, covering the above described well. The purpose of this plan is to describe the location of the proposed well, and proposed construction activities and operations plan, the surface disturbance involved, and the procedures to be followed in rehabilitating the surface after completion of the operations, so that a complete appraisal can be made of the environmental effect associated with this well.

1. EXISTING ROADS.

Exhibit A is a portion of a USGS map showing the wells and roads in the vicinity of the proposed location. The proposed wellsite is located approximately 16 miles SW of Artesia, New Mexico and the access route to the location is indicated in red and green on Exhibit A.

DIRECTIONS:

1. Proceed south from Artesia on Highway 285 for a distance of approximately 13 miles.
2. Turn west, go for 4 miles then turn north for 3/4 of a mile and northeasterly for 1/4 mile, then turn due east on to a ranch road for 1100' to the location. 500' of that will be a new road going to the southwest corner of the pad.

2. PLANNED ACCESS ROAD.

- A. There will be approximately 1100' of the new road.
- B. The road will be bladed 12 feet wide and covered with the necessary depth of caliche. The surface will be crowned, with drainage on one side.
- C. The road turning points have been flagged and the route of the road is visible.

3. LOCATION OF EXISTING WELL.

- A. There are existing wells within a one-mile radius of the wellsite. See Exhibit A.

4. LOCATION OF EXISTING AND/OR PROPOSED FACILITIES.

- A. There are no production facilities on this lease.
- B. In the event that the well is productive, the necessary production facilities will be installed on the drilling pad. If the well is productive oil, a gas or diesel self-contained unit will be used to provide the necessary power. No power will be required if the well is productive of gas.

5. LOCATION AND TYPE OF WATER SUPPLY.

- A. It is planned to drill the proposed well with a fresh water system. The water will be obtained from commercial sources and will be hauled to the location by truck over the existing road shown in Exhibit A.
