Mr. Roy Yarborough
New Mexico State Conservation Commission,
Hobbs, New Mexico.,

Dear Sir:-

We have drilled a well to 582' in Sec 15, 21S-27E Eddy County and plugged it, having had some of the heavy Getty Oil, about 4 ft (576' to 580') of saturation, but the last 2' get us into sulphur water and we had to plug it. I'll send you log, plugging record, etc., but we want to drill another well in the opposite corner of the same 40 acre tract and I wanted to know if the same bond will suffice, the one we have up on it, or if another bond will have to be made. I have some of your blank reports here form C-102 and would like to ask if we must fill out one of these to show about plugging the well. We had to do it quickly, as the sulphur water was coming in fast and we didn't want to damage what pay we had. Cement was put in up above 560' where the line first softened up.

Thanking you for an answer, I am,

Yours very truly,

RSMagruder:B
