The elevation of the derrick floor above sea level is 3213 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

We propose to drill with cable tools a Yates sand test to an approximate depth of 525 feet, to test the comparable zone found productive in the Cedar Hills Field, approximately 1 1/2 miles east of this location.

Surface casing, 8 5/8", will be run to about 30 feet and cemented with 10 sacks.

If oil is found in paying quantities, a string of 4 1/2" will be run to about 525 feet and cemented with 50 sacks.

All casing run and cemented will be under methods prescribed by the U. S. G. S.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
