

10. PLANS FOR RESTORATION OF THE SURFACE:

- A. After completion of drilling and/or completion operations, all equipment and other material not needed for operations will be removed from the well site. The location will also be levelled and cleaned of all trash and junk to leave the well site in an as aesthetically pleasing condition as possible. Any part of the pad not needed for production facilities will have the top soil replaced and reseeded.
- B. Unguarded pits containing fluids, if any, will be fenced.
- C. After abandonment, all equipment, trash, and junk will be removed and the well site will be cleaned. Any special rehabilitation requirements of the surface management agency will be complied with and accomplished as rapidly as possible.

11. OTHER INFORMATION:

- A. Topography - The land surface in the area is fairly level. In the immediate area of the well site, land slope is gentle down to the southwest.
- B. Soil - Top soil at the well site is a loamy sand.
- C. Flora and Fauna - The vegetation cover is medium and includes creosote bush, beargrass, brambles, sand sage, yucca, weeds, and range grasses. Wildlife in the area is that typical of semi-arid desert land and includes coyotes, rabbits, rodents, reptiles, dove and quail.
- D. Ponds and Streams - No lakes, ponds, or streams are in the area.
- E. Residences and other Structures - There are no occupied dwellings or other structures, other than oil field related equipment, within a mile of the proposed well site.
- F. Archaeological, Historical, and Cultural Sites - None observed. However, an archaeological reconnaissance is being accomplished and a report will be furnished.
- G. Land Use - Oil and gas production, grazing and wildlife habitat.
- H. Surface Ownership - Federal with a grazing lease.
