Dear Sir:

We proposed to test the subject well by flaring gas to the atmosphere in order to evaluate the possibility of producing gas with the assistance of a compressor.

The subject well is currently producing at a rate of 60 MCFPD with a flowing tubing pressure of 350 psi. It is felt that two days of testing will allow ample time for an evaluation.

Therefore, we request permission to flare approximately 200 MCF of gas in this 48 hour period. This test can be scheduled within two weeks after notification of approval.

Yours very truly,

R. C. ANDERSON
