We have recently received the casinghead gas over production report as of September 1993 showing the James-E #13 well in the Cabin Lake Delaware Field with a cumulative over production of 35,750 mcf. The allowable was increased to 374 mcf effective October 1993. By our calculations this overage has been reduced to 19,075 by December 31, 1993.

We would like to continue to make up the over production by limiting casinghead gas production to approximately 6,500 mcf per month compared to the 11,594 mcf monthly allowable. This would eliminate the over production in four months. Your approval is requested to make up the over production in this manner.

Thank you for your consideration.
