

NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS NOTICES

Submit this notice in triplicate to the Oil Conservation Commission or its proper agent before the work specified is to begin. A copy will be returned to the sender on which will be given the approval, with any modifications considered advisable, or the rejection by the Commission or agent, of the plan submitted. The plan as approved should be followed, and work should not begin until approval is obtained. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of notice by checking below:

NOTICE OF INTENTION TO TEST CASING SHUT-OFF		NOTICE OF INTENTION TO SHOOT OR CHEMICALLY TREAT WELL	
NOTICE OF INTENTION TO CHANGE PLANS		NOTICE OF INTENTION TO PULL OR OTHERWISE ALTER CASING	
NOTICE OF INTENTION TO REPAIR WELL		NOTICE OF INTENTION TO PLUG WELL	X
NOTICE OF INTENTION TO DEEPEN WELL

DateOIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

Gentlemen:

Following is a notice of intention to do certain work as described below at the

The Engas Co. Pecos Irrigation Well No. 1 in CB/L SH/L
Company or Operator Lease
of Sec. 9, T. 25, R. 28, N. M. P. M., Mildcat Field,
Eddy County.

FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

Confirming conversation of 1-14-44 with Mr. Ray Miller.

At total depth of 3043 the well was producing approximately 15 bbls. of salt water per hour from Delaware sand at 2600 to 2700 and 3022 to 3043 feet. Propose to place cement from 2950 to 3043 and 2500 to 2600 feet, another cement plug from 1400 to 1450 and 1200 to 1250 feet cementing off water at 1245 and another cement plug from 200 to 250 and 100 to 150 feet cementing off surface water. The balance of the hole will be filled with mud and proper marker placed at location.

Approved Nov. 17, 1944, 19
except as follows:

"APPROVAL CONDITIONED UPON
COMPLIANCE WITH REQUIREMENTS
OF OPC-WPB."

OIL CONSERVATION COMMISSION,

By Reg. GarbaczTitle Oil & Gas Inspector

The Engas Company
Company or Operator

By s/ W. K. DavisPosition Supt.

THEORY OF THE EARTH

CHAPTER I

OF THE ORIGIN OF THE EARTH

The origin of the earth is a subject which has attracted the attention of philosophers and scientists from the earliest times. The various theories which have been proposed are numerous, and it is not possible to discuss them all in detail. The most important of these theories are the nebular hypothesis, the tidal hypothesis, and the capture hypothesis.

The nebular hypothesis is the most widely accepted theory of the origin of the earth. It is based on the observation that the universe is filled with clouds of gas and dust, known as nebulae. These clouds are thought to be the source of all matter in the universe, and it is believed that the earth and other planets were formed from a nebula of gas and dust.

The tidal hypothesis is another theory of the origin of the earth. It is based on the observation that the earth and the moon are very close together, and it is believed that the earth was once a single body which was torn apart by the gravitational pull of the sun.

The capture hypothesis is a third theory of the origin of the earth. It is based on the observation that the earth and the moon have different compositions, and it is believed that the earth was once a separate body which was captured by the gravitational pull of the sun.
