Well No. 1-Boothes locate	ed 660 ft. from $\frac{N}{S}$ line	and 560 ft. from $\binom{E}{W}$ line of sec.	14
NW/4 14 (½ Sec. and Sec. No.)	26S 29E (Range)		
(½ Sec. and Sec. No.)	(Twp.) (Range)	(Meridian)	
Wildcat	Ed dy	N. M.	
(Field)	(County or Subdivision)	(State or Territory)	

The elevation of the derrick floor above sea level is N.A. ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We will start a $12\frac{1}{2}$ " hole which will be carried to 335' and at that point we will run 10 3/4" casing and mud same. Then we will proceed to drill ahead to 1100' where we will set 8 5/8" casing and mud same. Then we will drill ahead to the top of the Delaware in $8\frac{1}{2}$ " hole to approximately 3200' and if we do not encounter oil in the top of the Delaware, we will drill ahead to approximately 3600' and if no oil is encountered we will plug the hole. If oil is encountered we will run $5\frac{1}{2}$ " 0" casing and circulate cement to the top of the ground and complete the oil well in the usual manner.
