13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

ConocoPhillips requests allocation on this well as attached. This is in reference to DHC1382AZ.

14. I hereby certify that the foregoing is true and correct.

Allocation for the San Juan 29-6 Unit #106M (API 30-039-27542)

The San Juan 29-6 Unit #106M is an 80 acre Mesaverde/160 (320) acre Dakota infill well located in the southeast quarter of Section 31-T29N-R6W, Rio Arriba County, NM. The well was TD'd in March 2004, perforated & fracture stimulated in April 2004, and ready for first delivery on May 5, 2004.

Initial flow tests as reported by the field operator indicated:

Mesaverde (2-3/8" tubing at 5,290', perfs 5,380-5,836' OA, composite plug at 5,950')

4/27/04 1/2" choke N/A* psi tbg. press. 300 psi csg. press. 1,980 MCFPD + 0.5 BOPD + 10 BWPD

Dakota (2-3/8" tubing with packer set at 7,769', perfs 7,890-8,008' OA, PBTD 8,076' Sj MD)

4/30/04 1/2" choke 330 psi tbg. press. 600** psi csg. press. 2,178 MCFPD + 0.5 BOPD + 5 BWPD

Based on these initial stabilized flow tests, calculated DHC allocation percentages are:

Fixed Allocation (Gas)	Mesaverde	48%
	Dakota	52%

Fixed Allocation (Oil)	Mesaverde	100%
	Dakota	0%

Little oil was produced during these tests. Based on historical production data from offset wells, the Dakota is very dry and is expected to produce no oil. Therefore 100% of any oil production should be allocated to the Mesaverde.

Please allocate production based on the above estimated percentages.

Call with questions

Tom Johnson
832-486-2347

* Annular test – string float in tubing

**Pressure is from the annulus above the packer where Mesaverde perfs are open
