24. Attachments

The following, completed in accordance with the requirements of Onshore Oil and Gas Order No. 1 shall be attached to this form:

1. Well plat certified by a registered surveyor.

6345' GL

- 2. A Drilling Plan.
- 3. A Surface Use Plan (if the location is on National Forest System Lands, 5. Operator certification. SUPO shall be filed with the appropriate Forest Service Office).
- 4. Bond to cover the operations unless covered by existing bond on file(see item 20 above).

20 Days

Upon Approval

6. Such other site specific information and/ or plans as may be required by the authorized officer.

DRILLING PLAN

1. <u>ESTIMATED TOPS OF IMPORTANT GEOLOGIC MARKERS & ANTICIPATED WATER, OIL, GAS OR MINERAL FORMATIONS:</u>

Formation	ode Depth (ft)	Hydrocarbon/Water Bearing Zones
San Jose	Surface	
Ojo Alamo	2045	Aquifer
Kirtland	2255	
Fruitland	2690	Gas
Pictured Cliffs	3210	Gas
TD	3215	

All shows of fresh water and minerals will be adequately protected and reported.

2. Pressure Control Equipment:

All well control equipment shall be in accordance with Onshore Order #2 for 2M systems.

The minimum specifications for pressure control equipment that will be provided are included on the attached schematic diagram which shows the size and pressure ratings.

2000# BOP With Pipe Rams 2000# BOP With Blind Rams

The anticipated bottom hole pressure is 300 psi.

Auxiliary equipment to be used:

• Upper kelly cock with handle available.

The manifold includes appropriate valves and adjustable chokes. The kill line will have one check valve. Ram type preventers will be pressure tested to full working pressure (utilizing a test plug) or 70% of the internal yield pressure (without a test plug) at:

- Initial installation
- Whenever any seal subject to test pressure is broken
- Following related repairs
- At 30 day intervals

Pipe and blind rams shall be activated each trip.

A BOPE pit level drill will be conducted weekly for each drilling crew.

All tests and drills will be recorded in the drilling log.

The accumulator will have sufficient capacity to close all rams and retain 200 psi above precharge pressure without the use of closing unit pumps.

Master controls will be at the accumulator.

3. Casing & Cementing Program:

A. The proposed casing program will be as follows:

Depth	Hole Size	Size	*Grade	Weight	Thread	Condition
0-250'	12-1/4"	9-5/8"	H-40	32#	STC	New
0-2690'	8-3/4"	7"	K-55	23#	LTC	New
2640'-TD	6-1/4"	5-1/2"	K-55	15.5#	LTC	New

All casing strings below the conductor shall be pressure tested to 0.22 psi/ft. of casing string length or 1500 psi, whichever is greater, but not to exceed 70% minimum internal yield.

<u>Surface</u>: The bottom three joints of the surface casing will have a minimum of one centralizer per joint and one centralizer every joint thereafter (Total 5 centralizers estimated)

<u>7" Casing</u>: The bottom three joints of the 7" casing will have a minimum of one centralizer per joint and one centralizer every fifth joint thereafter to above Ojo Alamo with one turbolizer above and below the Ojo Alamo. (Total 12 centralizers estimated).

B. The proposed casing and cementing program will be as follows:

Surface String: 9-5/8" Surface cemented in a 12-1/4" hole at 250'.

32.3# H-40 ST&C 8 Rnd Saw tooth guide shoe

Cemented with 200 sacks Class B mixed at 15.6 ppg w/.25 pps

celloflake, 2% calcium chloride. Yield 1.19 ft³/sx, cement

designed to circulate to surface.

Production String: 7" Intermediate cemented in an 8-3/4" hole.

23# J-55 LT&C 8 Rnd

Float Collar

Joint

Float Shoe

Cement with 450 sacks Class B 50/50 POZ, 3% gel, 5# gilsonite,

1/4"# Flocele, .1% CFR 3, .2% Halad 344, yield 1.47 ft³/sx.

Cement designed to circulate to surface.

Pending hole conditions cement baskets may be installed above

TD.

Liner: 5-1/2" Liner

15.5# J-55 LT&C 8 Rnd

Shoe

Not cemented

Actual volumes will be calculated and adjusted with caliper log prior to cementing.

4. DRILLING FLUIDS PROGRAM:

interval	Type		Viscosity	pH	Water Loss	Remarks
0-250'	Spud	8.4-9.0	29-70	8.0	NC	FW gel
250-2690'	LSND	8.4-9.0	29-70	8.0	10-12	LCM as needed
2690-TD	Air					Foam as needed

NC = no control

Sufficient quantities of mud material will be maintained on site or be readily accessible for the purpose of assuring well control. Slow pump rates will be recorded on daily drilling report after mudding up. Visual mud monitoring will be conducted during operations.

5. EVALUATION PROGRAM:

Wire Line Logs: None
