|  | NORT   | HWEST NEWMEXICO  | PACKER LEAKAGE  | TEST INSTRUCTIO  | ONS  |  |   |
| <ol> <li>A packer leakage test shall be com<br/>completion of the well, and annually the<br/>Such tests shall also be commenced on a<br/>chemical or fracture treatment, and whe<br/>the tubing buye bene disturbed. Teste al</li> </ol>   | reafter as prescribed by the order author<br>all multiple completions within seven day<br>never remedial work has been done on a | izing the multiple completion<br>rs following recompletion and<br>well during which the packet | . for Flow Tes<br>d/or remain shut-<br>r or   |  | as for Flow Test No.                             | eak was indicated during Flow Test No. 1. Pr<br>1 except that the previously produced zone s<br>is produced.   |   |
| <ul> <li>the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division.</li> <li>At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.</li> </ul> |  |  | <ol> <li>Pressur<br/>intervals as f<br/>intervals dur<br/>immediately<br/>flow period,</li> </ol> | 7. Pressures for gas-zone tests must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each flow period, at fifteen-minute intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement immediately prior to the conclusion of each flow period. 7-day tests: immediately prior to the beginning of each flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells |  |  |   |
| 3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.  |  |  | e with recordin<br>once at the e<br>completion,   | which have previously shown questionable test data.<br>24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded<br>with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and<br>once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual<br>completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required<br>above being taken on the gas zone.  |  |  |   |
| 4. For Flow Test No. 1, one zone of t<br>while the other zone remains shut-in. So<br>24 hours in the case of an oil well. Note<br>atmosphere due to lack of a pipeline cor   | uch test shall be continued for seven day<br>e: if, on an initial packer leakage test, a g                                       | s in the case of a gas well and<br>as well is being flowed to the                              | l for<br>8. The res<br>test. Tests s<br>Northwest N   | hall be filed with the Azte<br>New Mexico Packer Leak  | c District Office of the<br>age Test Form Revise | in triplicate within 15 days after completion o<br>he New Mexico Oil Conservation Division on<br>ed 10-01-78 with all deadweight pressures inc<br>y) and gravity and GOR (oil zones only). | 1 |
| 5. Following completion of Flow Tess<br>above.   | t No. 1, the well shall again be shut-in, it   | n accordance with Paragraph  |   | no ning ompon  |  | ,,   |   |
