- 13 Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the final site is ready for final inspection.)

In accordance the Case 1246, Order # R-11363, it is intended to downhole commingle the Blanco MV (72319) and Tapacito PC (85920). The existing MV perforations are 5826-5866' and the estimated PC perforations are 3688-3715'. A CBL will be run from 5000' to surface to determine TOC. If necessary, squeeze hole may be shot above TOC and attempt to circulate cement to surface. Selectively perforate and fracture the zone. Clean out to BBTD. Run tubing & put well on production. Recommended allocation will be by Subtraction method following 60 days of stabilized production. Commingling will not reduce the total remaining production's value. The interest owners are identical for each zone. Rates reported to NMOC - Aztec for final determination.
