March 6, 2012

Dear Ms. Zubrod,

The Oil Conservation Division ("Division") is in receipt of your request to beneficially use produced water to fracture treat the State Gas Com A #1 API # 30-045-10062, UL-N, Sec 36, Twn 31N, R12W. In granting this beneficial use the Division agrees and requires that:

1. The aquifer is an exempted aquifer because it does not currently serve as a source of drinking water, and that cannot now and will not in the foreseeable future serve as a source of drinking water because it is hydrocarbon producing. 19.15.2.7.E.5 NMAC
2. The water samples from the producing wells adjacent to State Gas Com A #1 have atypically low TDS for the San Juan Basin.
3. The produced water ConocoPhillips proposes to use for well stimulation is less than 11,000 ppm TDS.
4. The produced water ConocoPhillips proposes to use in its pilot test is half the TDS of fluid used in a standard conventional well stimulation.
5. Notification is required to be given to the district office 24-72hrs prior to the commencement of hauling the produced water and shall include a schedule with beginning and ending dates.
6. All trucks hauling produced water to the location must have a copy of their approved C-133 and a copy of this letter in the truck.
7. This letter is to be in the trucks authorized to haul the produced water only for the time periods supplied in the required notification.

March 6, 2012

Page 2

8. Conoco is only authorized to haul water from downstream of the Vasely SWD #2 (API # 30-045-29936) second stage filtration system, which can be loaded into the trucks at the Vasely SWD #2 facility or the Mar Vista SWD #1 (API # 30-045-35126) facility.
9. Conoco is required to keep a log of the loads of produced water taken to the location and have it available upon request.
10. This approval will expire on April 30st, 2012

If you have any further questions, please feel free to contact Brandon Powell at Brandon.Powell@state.nm.us or 505-334-6178 xt 116.

Sincerely,

A handwritten signature in cursive script, appearing to read "Charlie Perrin".

Completion Supervisor

Request for Alternative Use of Produced Water

1. COPC wishes to use 100% produced water as a base fluid for our stimulation of the State Gas Com A #1. Plans are to use only this water to stimulate the Mesa Verde zone. The stimulation job will be completed no later than May 31, 2012. The legal description for the State Gas Com A #1 is as follows:

Location: 36° 51' 5.81"N 108° 3' 10.228" W ; T31N R12W Sec 36 Unit N

API: 3004510062

2. The source of the produced water for this alternative use pilot test will be the Vasaly SWD #2. The water will be taken downstream from the second stage filtration, just upstream from the injection wellhead. This treated and filtered water will be transferred by pipeline to two 500 Bbl holdings tanks located on the Mar Vista SWD #1. Vacuum trucks will then haul this water to the State Gas Com A #1. This will be a mixture of produced water from Dakota, Mesa Verde, Pictured Cliff and Fruitland formations. Historic water sample from the Vasaly SWD #2 have averaged less than of 11,000 ppm TDS. A recent water analysis of Vasaly SWD #2 is attached as appendix A. The Vasaly SWD #2 is 100% owned by ConocoPhillips.

3. We anticipate no compatibility issues with the use of this fluid. The bulk of the water at this disposal well is coming from the same formations we will be stimulating. API water analyses of this water source indicate negligible scaling tendencies. Water samples from the State Com AJ #34 and State Com AK #35 which are adjacent to the State Gas Com A #1, and are completed in the same target formations (MV, DK) as the State Gas Com A #1 (MV) are attached in appendix B. Compatibility analysis from mixing Vasaly SWD #2 water with samples from the adjacent producing wells at three different mix ratios (25% / 75%, 50% / 50%, 75% / 25%) is also attached in appendix B.

4. A list of the wells disposing of water at the Vasaly SWD #2 is attached in Appendix C.

5. We anticipate that we will use approximately 2,400 bbls of water to stimulate this well.

6. We will be storing the produced water on location in six (6) 400 bbl frac tanks.

7. All fluids flowed back after the stimulation will be contained in a flowback tank, then transported to an approved disposal facility.
