The existing MV perforations are 5477'-5520', and 5879'-6000'. Energen intends to set a bridge plug above the MV perforations, then perforate and fracture the PC around 3737-3786'. Once flowback and cleanout is complete, the bridge plug will be drilled out, tubing landed the well will be put back on to production. Recommended allocation will be by the subtraction method following 60 days of stabilized production. Commingling will not reduce the total remaining productions value. The interest owners are identical for each zone. Rates will be reported to NMOC-D-Aztec for final determination.
