Closed-Loop System Permit or Closure Plan Application	on
Closed-Loop System Permit or Closure Plan Application (that only use above ground steel tanks or haul-off bins and propose to implement waste real Type of nation: M Permit Closure	moval for closure)
Type of action: Permit Closure	
Instructions: Please submit one application (Form C-144 CLEZ) per individual closed-loop system request. For any application closed-loop system that only use above ground steel tanks or haul-off bins and propose to implement waste removal for closed-loop system.	
Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of su	-
environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable governmental aut	
1. Operator: ENCANA OIL & GAS (USA) INC. OGRID #: 282327

CLOSED-LOOP SYSTEM DESIGN PLAN

Cana.

natural das

The closed-loop system will consist of a series of temporary above-ground storage tanks and/or haul-off bins suitable for holding the cuttings and fluids from drilling operations. The closed-loop system will not entail temporary pits, below-grade storage tanks, below-grade sumps, or drying pads.

Design considerations include:

- 1. The closed-loop system will be signed in accordance with 19.15.17.11 NMAC.
- 2. The closed-loop system storage tanks will be of adequate volume to ensure confinement of all fluids and provide sufficient freeboard to prevent uncontrolled releases.
- 3. Topsoil will be salvaged and stored for use in reclamation activities.
- 4. The closed-loop system storage tanks will be placed in bermed secondary containment sized to contain a minimum of 110 percent of the volume of the largest storage tank.

CLOSED-LOOP SYSTEM OPERATING & MAINTENANCE PLAN

The closed-loop system will be operated and maintained to contain liquids and solids; minimize the amount of drilling fluids and cuttings that require disposal; maximize the amount of drilling fluid recycled and reused in the drilling process; isolate drilling wastes from the environment; prevent contamination of fresh water; and protect public health and the environment.

Operation and maintenance considerations include:

- 1. Fluid levels will be maintained to provide sufficient freeboard to prevent over-topping.
- 2. Visual inspections will be conducted on a daily basis to identify any potential leaks and to ensure that the closed-loop system storage tanks have sufficient freeboard to prevent over-topping.
- 3. Only drilling fluids or cuttings intrinsic to, used by, or generated from, drilling operations will be stored in the closed-loop system storage tanks. Hazardous waste, miscellaneous solid waste, and/or debris will not be stored in the storage tanks.
- 4. The OCD District Office will be notified within 48 hours of discovery of a leak in the closed-loop drilling system. If a leak is discovered, all liquid will be removed within 48 hours and the damage repaired.

CLOSED-LOOP SYSTEM CLOSURE PLAN

The closed-loop system will be closed in accordance with 19.15.17.13 NMAC.

Closure considerations include:

- 1. Drilling fluids will be recycled and transferred to other permitted closed-loop systems or returned to the vendor for reuse, as practical.
- 2. Residual fluids will be pulled from the storage tanks, mixed with saw dust or similar absorbent material, and disposed of at Industrial Ecosystem, Inc. waste disposal facilities.
- 3. Remaining cuttings or sludges will be vacuumed from the storage tanks and disposed of at the Envirotech, Inc and/or Industrial Ecosystem, Inc. waste disposal facilities.
- 4. Storage tanks will be removed from the well location during the rig move.
- 5. The well pad will be reclaimed and seeded in accordance with subsections G, H and I of 19.15.17.13 NMAC.
