### State of New Mexico Energy, Minerals and Natural Resources Department

Susana Martinez Governor

David Martin Cabinet Secretary-Designate

Jami Bailey, Division Director Oil Conservation Division

Brett F. Woods, Ph.D. Deputy Cabinet Secretary

New Mexico Oil Conservation Division approval and conditions listed below are made in accordance with OCD Rule 19.15.7.11 and are in addition to the actions approved by BLM on the following 3160-3 APD form.

No allowable will be assigned to this completion until all interest have been consolidated or a non-standard unit has been approved by the division.

Surface: 1387' FNL, 304' FEL Unit H, Sec. 9, T26N R04W Botton Hole: 1070' FNL, 670' FEL Unit A, Sec 9, T26N, R05W Rio Arriba County, NM GL Elev: 6946'

#### **Drilling Plan**

All Lease and /or unit operations will be conducted in such a manner that full compliance is made with applicable laws, regulations, BLM Onshore orders and EnerVest's approved Further Development Project Plan. The operator is fully responsible for the actions of its subcontractors. A copy of the APD and Conditions of Approval will be available to the field representatives to ensure compliance.

#### 4.1, 4.2 <u>ESTIMATED (TVD) FORMATION TOPS (KB) and NOTABLE ZONES:</u>

The following are estimates of formation and proposed casing depths.

| Formation Name             | Depth (TVD) | Rock Type              | Comments                       |
|----------------------------|-------------|------------------------|--------------------------------|
| San Jose                   | Surface     | Sandstone              |                                |
| Ojo Alamo                  | 2948'       | Sandstone              | Possible Gas, Water            |

| Mancos                     | 5940'       | Shale                  | Sloughing Shale                |
| Greenhorn                  | 7788'       | Limestone              | Gas, Oil                       |
| Graneros                   | 7823'       | Shale                  | Gas, Oil, Water                |
| Dakota                     | 7841'       | Sandstone              | Gas, Oil, Water                |
| Proposed Total Depth       | 8131'       |                        |                                |

Fresh water zones will be adequately protected by setting and cementing the surface casing. All zones containing commercial quantities of oil or gas will be cased and cemented.

This well is to be drilled as a directionally drilled "S-shaped" well. The well is to be drilled vertically from surface to a kick off point at  $\pm$ -600 ft. The well will be directionally drilled at a 311 degree azimuth to a point approx 485 ft north west east of the surface location and at an estimated MD of  $\pm$ -3500 ft. The well will be drilled vertically from that point to the estimated TD.

Surface: 1387' FNL, 304' FEL Unit H, Sec. 9, T26N R04W Botton Hole: 1070' FNL, 670' FEL Unit A, Sec 9, T26N, R05W Rio Arriba County, NM GL Elev: 6946'

#### 4.3 PRESSURE CONTROL:

Maximum expected pressure is ~1789 (.22 pressure gradient) psi. The drilling contract has not yet been awarded, thus the exact BOP and Choke Manifold model to be used is not yet known. A typical 11" 2000 psi model is pictured in Exhibits A & B.

A remote accumulator will be used, the pressures, capacities location of the remote and manual controls will be identified at the time of the BLM supervised BOP test.

BOP equipment, accumulator, choke manifold and all accessories will meet or exceed BLM requirements as listed in Onshore Order #2 for the 2M systems. The pressure control equipment considerations include but will not be limited to:

- 1. BOP will be a double gate ram preventer with a set of blind rams and a set of properly-sized pipe rams.
- 2. Accumulator will have sufficient capacity to close the BOP rams and retain 200 psi above pre charge.
- 3. Accumulator fluid volume is to be maintained at manufacturer's recommendations.
- 4. BOP will also have manual closing handles available.
- 5. 2" minimum kill line and kill line valves (2).
- 6. Choke manifold (2" lines) with 2 adjustable chokes with valves and gauge.
- 7. Manually operated Kelly cocks available.
- 8. Safety valve and sub(s) with adequate opening for all drill strings used.
- 9. Fill line and flow line above the upper-most BOP rams.

BOPs will be pressure tested; after initial installation, before drilling out from under all set and cemented casing strings and any time a seal is broken. The BOPs will also be pressure tested a minimum of once every 21 days by a 3<sup>rd</sup> party. Additionally, the BOPs will be operationally checked every 24 hours.

All tests and pressure tests will be recorded on IADC log.

Ram type preventors, choke manifold and related pressure control equipment will be pressure tested to the rated working pressure of 2000 psi (high) and 250 psi (low).

The casing strings will be pressure tested per BLM Onshore Order #2 for 30 min as follows:

- a. Surface casing tested to 600 psi prior to drilling out the shoe.
- b. Intermediate casing tested to 1500 psi prior to drilling out the shoe. (If intermediate casing is used.)
- c. Production casing will be tested to 6000 psi (either 4 ½" 11.6# N-80 or 5 ½" 17# N-80) at the commencement of completion operations.

Surface: 1387' FNL, 304' FEL Unit H, Sec. 9, T26N R04W Botton Hole: 1070' FNL, 670' FEL Unit A, Sec 9, T26N, R05W

Rio Arriba County, NM GL Elev: 6946'

#### 4.4 PROPOSED CASING PROGRAM (S):

The casings program is designed to use **Option A** below. If while drilling the hole conditions indicate that an intermediate casing may be needed then **Option B** will be used.

Casing Option A

Surface and Intermediate casings are to be cemented to surface, production casing is intended to be cemented with a 200' overlap into the intermediate casing.

#### 4.5 CASING CEMENT:

A prototypical cementing program is listed as follows, site-specific cement designs will be produced for each well as the hole conditions warrant. The cement program will designed to meet the BLM Onshore Order #2 and NMOCD requirements.

Surface: 1387' FNL, 304' FEL Unit H, Sec. 9, T26N R04W Botton Hole: 1070' FNL, 670' FEL Unit A, Sec 9, T26N, R05W Rio Arriba County, NM GL Elev: 6946'

Surface casing will be cemented to the surface.

Cement and properties; Mix and pump 225 sacks (313 cu ft) Type III cement (or equivalent) cement. Slurry density is to be 14.6 (yield = 1.39 cu ft/sx). Volume will include 100% excess. Cement is to be displaced using a top plug.

Two centralizers will be run on the shoe joint, one centralizer each on the next two joints and then one centralizer on every third joint thereafter.

The surface casing will be pressure tested to 600 psi prior to drilling out the shoe.

**Production casing (for Casing Option A only)** will be cemented in 3 stages covering all zones of production potential and the 3<sup>rd</sup> stage is intended to circulate cement to surface. Volumes based on 50% OH excess cement for stage 1 and 45% for stages 2 and 3.

Stage 1 Lead cement; mix and pump 107 sacks (228 cu ft) premium lite slurry with CaCl2, cello flake and gilsonite. Estimated slurry density is to be 12.1 (yield = 2.13 cu ft/sx).

Stage 1 Tail cement; mix and pump 418 sacks (840 cu ft) premium lite high strength cement with CaCl2, cellophane, gilsonite and fluid loss agent. Slurry density is to be 12.5 (yield = 2.01 cu ft/sx).

#### DV tool at +/- 4072 ft. MD

Stage 2 Lead cement; mix and pump 120 sacks (255 cu ft) premium lite slurry with CaCl2, cello flake and gilsonite. Estimated slurry density is to be 12.1 (yield = 2.13 cu ft/sx).

Stage 2 Tail cement; mix and pump 50 sacks (70 cu ft) Type III cement (or equivalent) cement. Slurry density is to be 14.6 (yield = 1.39 cu ft/sx). or equivalent cement.

#### DV tool at +/- 3185 ft. MD

Stage 3 Lead cement; mix and pump 492 sacks (1048 cu ft) premium lite slurry with CaCl2, cello flake and gilsonite. Estimated slurry density is to be 12.1 (yield = 2.13 cu ft/sx).

Stage 3 Tail cement; mix and pump 50 sacks (70 cu ft) Type III cement (or equivalent) cement. Slurry density is to be 14.6 (yield = 1.39 cu ft/sx). or equivalent cement.

Two centralizers will be run on the shoe joint, one centralizer on every third joint into the surface casing.

Surface: 1387' FNL, 304' FEL Unit H, Sec. 9, T26N R04W Botton Hole: 1070' FNL, 670' FEL Unit A, Sec 9, T26N, R05W Rio Arriba County, NM GL Elev: 6946'

Intermediate casing (for Casing Option B only) will be cemented to surface in 2 stages, stage tool to be set at +/- 3185' MD. Cement will be designed to circulate to surface. Volumes will be based on 45% excess in OH.

Stage 1 Lead cement; mix and pump 58 sacks (123 cu ft) premium lite slurry with CaCl2, cello flake and gilsonite. Estimated slurry density is to be 12.1 (yield = 2.13 cu ft/sx).

Stage 1 Tail cement; mix and pump 50 sacks (70 cu ft) Type III cement (or equivalent) cement. Slurry density is to be 14.6 (yield = 1.39 cu ft/sx). or equivalent cement.

DV tool @ +/- 3185 ft. MD

Stage 2 Lead cement; mix and pump 266 sacks (566 cu ft) premium lite slurry with CaCl2, cello flake and gilsonite. Estimated slurry density is to be 12.1 (yield = 2.13 cu ft/sx).

Stage 2 Tail cement; mix and pump 50 sacks (70 cu ft) Type III cement (or equivalent) cement. Slurry density is to be 14.6 (yield = 1.39 cu ft/sx). or equivalent cement.

Two centralizers will be run on the shoe joint, one centralizer on every other joint for 14 joints and then one centralizer on every third joint thereafter.

The Intermediate casing will be pressure tested to 1500 psi prior to drilling out the shoe.

**Production casing (for Casing Option B only)** will be cemented into the intermediate casing with a minimum of 200 ft overlap. Volumes based on 45% excess in OH.

Lead cement; mix and pump 117 sacks (250 cu ft) premium lite slurry with CaCl2, cello flake and gilsonite. Estimated slurry density is to be 12.1 (yield = 2.13 cu ft/sx).

Tail cement; mix and pump 239 sacks (481 cu ft) premium lite high strength cement with CaCl2, cellophane, gilsonite and fluid loss agent. Slurry density is to be 12.5 (yield = 2.01 cu ft/sx).

Two centralizers will be run on the shoe joint, one centralizer on every other joint into the intermediate casing, then every 3<sup>rd</sup> joint to surface.

The production casing will be pressure tested for 30 minutes at the commencement of completion operations as outlined above

Where cement has not been circulated to surface (or to planned depth) a CBL or temperature survey will be run to determine the TOC for that casing string. A CBL log will be run in the production casing prior to the commencement of completion operations.

Surface: 1387' FNL, 304' FEL Unit H, Sec. 9, T26N R04W Botton Hole: 1070' FNL, 670' FEL Unit A, Sec 9, T26N, R05W

Rio Arriba County, NM GL Elev: 6946'

Cement specifications may vary slightly due to cement type and cement contractor availability.
4.6 MUD PROGRAM

| Depth                | Туре                                     | Visc         | Fluid Loss         |                |                 |
|----------------------|--|--------------|--------------------|----------------|-----------------|
| 0-500'<br>500'-4072' | FW gel/Lime Spud M<br>LSND/Gel sweeps, L |              | 8.4-9.0<br>8.5-9.4 | 30-40<br>40-60 | N/C<br>20-40 cc |
| 4072'- 8178'         | LSND/Gel sweeps, L                       | CM as needed | 8.5-9.4            | 20-40          | 6-10 cc         |

The well will be drilled utilizing a closed loop mud handling system. The closed loop system will comply with the NMOCD pit rules pertaining to the use of the system and disposal of the drill cuttings and waste. Drilling mud will be moved for re-use to drill subsequent wells whenever possible.

Viscosity, mud weight and other physical and chemical characteristics of the drilling mud will be varied as required to keep the hole clean, circulate drill cuttings, prevent caving, prevent lost circulation and maximize penetration rate.

Sufficient mud and materials will be kept on site to maintain mud properties and meet lost circulation or mud weight requirements at all times.

Mud design may change depending on well conditions, LCM, fluid loss and viscosity will be determined by the EnerVest representative and the mud engineer on site.

#### 4.7 CORING, TESTING, & LOGGING

No cores or drill stem tests are planned. Well logs to be run are:

#### Casing Option A

**500' to TD;** GR/ Cement Bond Log, at the commencement of completion operations. **1000' to TD;** GR/Induction/Density Neutron. (Cased hole GR/Neutron will be run if the hole conditions do not allow the use of the open hole logs)

#### Casing Option B

**500' to 4072';** GR/ Cement Bond Log, if cement is not circulated to surface in intermediate casing.

**4072' to TD;** GR/Induction/Density Neutron. (Cased hole GR/Neutron will be run if the hole conditions do not allow the use of the open hole logs)

Surface: 1387' FNL, 304' FEL Unit H, Sec. 9, T26N R04W Botton Hole: 1070' FNL, 670' FEL Unit A, Sec 9, T26N, R05W

Rio Arriba County, NM GL Elev: 6946'

This well will be directionally drilled and a record of the deviation will be run while drilling. A deviation survey will be submitted at the conclusion of the well completion.

None

#### 4.8 <u>ANTICIPATED PRESSURES AND TEMPERATURES:</u>

Anticipated hazardous gas (H2S):

a. Expected bottom hole pressure: < 1789 psi</li>
b. Anticipated abnormal pressure: None
c. Anticipated abnormal temperatures: None

If any of the foregoing conditions are unexpectedly encountered, suitable steps will be taken to mitigate according to accepted industry best practices.

#### 4.9 OTHER INFORMATION:

đ.

The anticipated spud date is spring 2013. The spud date will be dependent on the weather conditions, road conditions and the Conditions of Approval.

The dirt work for road and well pad construction will commence upon approval of the APD and will be dependent on weather conditions.

The well will be spud after well pad construction is complete and a suitable rig becomes available. The duration of drilling operations is expected to be from two to three weeks. The drilling rig and associated equipment will be removed and preparations will be made for the completion of the well.

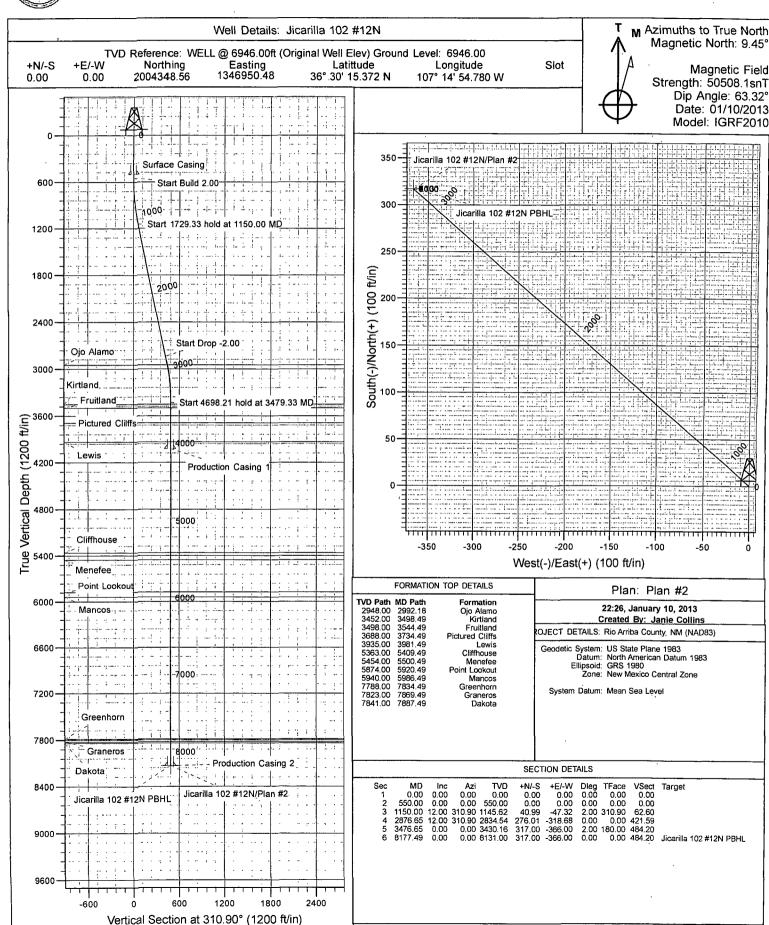

Completion will start about one to four weeks after the finish of the drilling operations. A completion rig will be moved in for the completion phase. The completion phase of the well is expected to +/- two weeks. The completion phase will include; perforating, acidizing, fracture stimulation and well testing.

Some events/situations may arise that could potentially change the starting date or project duration that are out of EnerVest's control. If such events/situations arise, the proper officials will be promptly notified.

#### Surface Use Plan

#### 1. <u>DIRECTIONS & EXISTING ROADS (See attached Vicinity map)</u>

The location is approximately 29 miles NW of the intersection of US Hwy 550 and NM Hwy 537

Latitude: N 36.50427 Latitude: W 107.24855

From Intersection of US Hwy 550 and NM State Hwy 537: Turn north on Hwy 537 for 28 miles, turn left on J-6, go 2.5 mi, turn right on J-64, go 1.0 mi, the location is on the right.

#### 2. ROAD TO BE BUILT OR UPGRADED

- A. Drilling of this well will require the construction of 179' of new access road from J-64. The access is shown on the Access Plat and Vicinity map. After the well is completed as a commercial producer, the need for a pipeline is ascertained, a pipeline will be constructed from the north corner of location to an existing Williams pipeline.
- B. Width: 20 ft running surface; 40 ft total ROW with is applied for to accommodate access and drainage installation along the road.
- C. Maximum grade: 0-1%.
- D. Turnouts: No turnouts are planned for this access road.
- E. Drainage design: The drainage design for the proposed new access road will be in conformance with Jicarilla Apache Tribal and BIA standards with the agreement of the of the Jicarilla Apache Tribe. It is proposed to build a drainage holding and diversion pond near location if needed to prevent location erosion and divert drainage around the location. Any area used in this fashion will have been reviewed and given clearance for the possible archaeological and environmental impact.
- F. Location and size of culverts: None are required.
- G. Surface Materials: No gates, cattle guards or fences to be installed along the access road or the location. Road base material may be used as necessary during the drilling and completion phases of this project.

#### 3. SURFACE OWNERSHIP

The surface ownership of the well site location and access roads are all on Jicarilla Apache Nation land.

#### 4. EXISTING WELLS (See the Vicinity map)

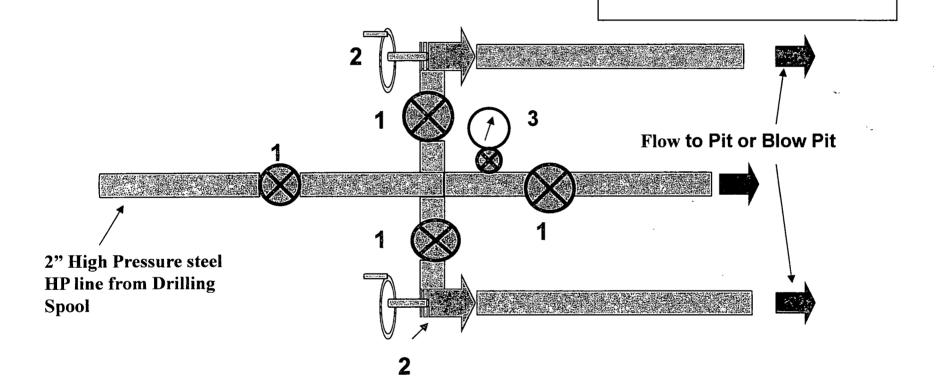

This is a development location. There are thirty-four existing wells within a one-mile radius of the proposed location as shown on the Vicinity map.

# EnerVest Jicarilla 2013 Drilling Program 2000 psi Choke Manifold

## Exhibit B

#### **Components**

- 1. 2" Valves (2M)
- 2. Adjustable Chokes
- 3. Gauge

EnerVest
