Form C-144 CLEZ Revised August 1, 2011

For closed-loop systems that only use above ground steel tanks or haul-off bins and propose to implement waste removal for closure, submit to the appropriate NMOCD District Office.

11289

Closed-Loop System Permit or Closure Plan Application

Santa Fe, NM 87505

(that only use above ground steel tanks or haul-off bins and propose to implement waste removal for closure)

Type of action: Permit Closure

Instructions: Please submit one application (Form C-144 CLEZ) per individual closed-loop system request. For any application request other than for a closed-loop system that only use above ground steel tanks or haul-off bins and propose to implement waste removal for closure, please submit a Form C-144.

Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of surface water, ground water or the environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable governmental authority's rules, regulations or ordinances.

EnerVest Operating, LLC

Closed Loop System

Closed Loop Design and Construction Plan

In accordance with 19.15.17.11 NMAC, EnerVest Operating, LLC. (EV) will utilize a closed loop system while performing Plug & Abandonment operations on this well site to insure the confinement of oil gas or water to prevent an uncontrolled release.

EV will use an above ground closed loop system for fluids handling and solids separation.

Design and construction considerations are:

- 1. A well sign shall be posted at the well site in accordance with 19.15.3 103 NMAC.
- 2. No drying pads or sumps will be used in conjunction with this closed loop system.
- 3. Solids that have been separated from the fluids will be hauled to a properly permitted landfarm facility.
- 4. The fluids will be conditioned for re-use as much as is practical, any fluids left over at the end of the process will be hauled to next location for re-use or hauled to a properly permitted facility for disposal.

Closed Loop Operating and maintenance plan

In accordance with 19.15.17.12 NMAC, EV shall operate and maintain the closed loop system in a manner that will contain all solids and liquids, maintain the systems integrity, prevent contamination of fresh water and protect public health and the environment. This will be accomplished by the following processes:

- 1. EV shall recycle, re-use or reclaim and dispose of all fluids and solids in a manner approved by the current NMOCD rules.
- 2. EV shall not discharge into or store any hazardous waste in the closed loop system, nor shall it allow miscellaneous solid waste or debris into the closed loop system.
- 3. The pit tanks will be of sufficient volume to maintain a safe freeboard prior to the disposal of the solids and liquids from the rig operations.
- 4. Disposal of the solids and liquids will be done on a periodic basis maintaining a safe and responsible free board in the pits. The solids will be transported off the site and disposed of at a properly permitted land farm. The liquid portion of the fluids will be separated and re used where practical. Any portion that cannot be re used will be disposed of at an appropriate facility.
- 5. The closed loop system will be inspected daily while the system is in use. EV shall maintain a log of such inspections.
- 6. In the event of a leak from any of the components within the closed loop system, EV will take appropriate measures to repair the leak and contain the release and report to NMOCD the event within 48 hours of the detection of the leak or release.

Closure Plan

In accordance with 19.15.17.13 NMAC EV will not use any temporary pits, drying pads or sumps in the TA operations. The closed loop system(s) and all associated activities will be performed on the well site and will not be performed on or in an area that will not be used for future service and operations of the well. The closure of the closed loop system will be performed as follows:

- 1. Upon termination of rig operations, all liquids remaining in the closed loop system will be either transported to another site for re-use or will be disposed of at an appropriate facility.
- 2. The closed loop system(s) components, including any and all of the containment tanks will be removed from the location in conjunction with the drilling or completion rig from the well site.
- 3. Upon termination of the rig operations any remaining solid materials in the closed loop system will be disposed of at a properly permitted landfarm facility.
- 4. Within sixty days from the date that EV ceases drilling activities at the well site for which the closed loop permit was issued and the closed loop equipment has been removed from the well site, EV shall complete and execute items 9 and 10 of the C-144 CLEZ and file with the NMOCD district office.
