				TEST INSTRUCTIO	NIC			
	NOKI	THWEST NEWMEXICC	PACKER LEAKAGE	TEST INSTRUCTIO	'NS			
1. A packer leakage test shall be comm completion of the well, and annually there				6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall				
Such tests shall also be commenced on all chemical or fracture treatment, and when	ever remedial work has been done on	a well during which the packe	er or	remain shut-in while the zone which was previously shut-in is produced.				
the tubing have been disturbed. Tests sha requested by the Division.	Il also be taken at any time that comm	unication is suspected or who	7. Pressu			one with a deadweight pressure gauge at time		
·				intervals as follows: 3 hours tests: immediately prior to the beginning of each flow period, at fifteen-minute intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement immediately prior to the conclusion of each flow period. 7-day tests: immediately prior to the beginning of each				
Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.				flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells				
	·		24-hou		es, throughout the entire	e test, shall be continuously measured and recorded		
3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided				with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required				
however, that they need not remain shut-	in more than seven days.			taken on the gas zone.	be required on the off 20	me omy, with deadweight pressures as required		
4. For Flow Test No. 1, one zone of the while the other zone remains shut-in. Such								
24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.				shall be filed with the Azte	c District Office of the N	iplicate within 15 days after completion of the New Mexico Oil Conservation Division on		
						0-01-78 with all deadweight pressures indicated nd gravity and GOR (oil zones only).		
5. Following completion of Flow Test above.	No. 1, the well shall again be shut-in, i	in accordance with Paragraph	3
