| Title: District #3 | | | | Monday, Ap | ril 29, 2013 | | | | |
| | | HWEST NEWMEXICO | DACKED LEAKAGE | TEST INSTRUCT | NIC | | | | |
| | NORT | HWEST NEWMEXICO | FACKER LEARAGE | | 2003 | | | | |
| 1. A packer leakage test shall be commenced on each multiply completed well within seven days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. | | | | 6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain four in which was previously between the previously produced zone shall remain the previously produced to the previously produced zone shall remain the previously produced zone shall be previously produced zone zone zone zone zone zone zone zone | | | | | |
| Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical of fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division. | | | or | remain shut-in while the zone which was previously shut-in is produced. | | | | | |
| | | | intervals as | 7. Pressures for gas-zone tests must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each flow period, at fifteen-minute intervals to the beginning of each flow period. | | | | | |
| At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified. | | | | intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement immediately prior to the conclusion of each flow period. 7-day tests: immediately prior to the beginning of each flow period, at least one time during each flow period (at approximately the midway point) and immediately prior | | | | | |
| | | | to the concl which have | usion of each flow period previously shown question | . Other pressures may mable test data. | be taken as desired, or may be requested | on wells | | |
| 3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided | | | | 24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual | | | | | |
| however, that they need not remain shut | | איז אוויזיאנגע, איז | completion, | | | zone only, with deadweight pressures as a | | | |
| 4. For Flow Test No. 1, one zone of t while the other zone remains shut-in Su | | | | | | | | | |
| while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours. | | | 8. The re- test. Tests | The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on | | | | | |
| | | | | | | d 10-01-78 with all deadweight pressures i) and gravity and GOR (oil zones only). | ndicated | | |
| 5. Following completion of Flow Test above. | No. 1, the well shall again be shut-in, i | n accordance with Paragraph | 3 | | | | | | |
