	NOR	THWEST NEWMEXICO) PACKER LEAKAGI	E TEST INSTRUCTI	ONS			
completion of the well, and annually t Such tests shall also be commenced o	mmenced on each multiply completed we hereafter as prescribed by the order author n all multiple completions within seven da henever remedial work has been done on	orizing the multiple completio ays following recompletion a	n. for Flow Te nd/or remain shut		e as for Flow Test No	eak was indicated during Flow Test No. 1. Procedure 1 except that the previously produced zone shall 1 is produced.		
	s shall also be taken at any time that com		en 7. Pressu			sh zone with a deadweight pressure gauge at time		
			intervals du	ring the first hour thereo	f, and at hourly interva	beginning of each flow period, at fifteen-minute als thereafter, including one pressure measurement		
	mmencement of any packer leakage test, he test is to be commenced. Offset opera					7-day tests: immediately prior to the beginning of each approximately the midway point) and immediately prior		

The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure 3. stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 5. above

flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells which have previously shown questionable test data.

24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.

 The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
