	NOR	THWEST NEWMEXICO	O PACKER LEAKAGI	E TEST INSTRUCTI	DNS				
 A packer leakage test shall be come 	menced on each multiply completed w	all within seven days ofter act	ual 6 Flow?	rest No. 2 shall be condu	ted even though no leak was indicated during Flow Tes	et No. 1. Procedure			
completion of the well, and annually the	reafter as prescribed by the order author	orizing the multiple completion	on. for Flow Te	6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain shut-in while the zone which was previously shut-in is produced.					
Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when			er or						
requested by the Division.			intervals as	follows: 3 hours tests: in:	t be measured on each zone with a deadweight pressure mediately prior to the beginning of each flow period, at	fifteen-minute			
2. At least 72 hours prior to the comr			immediately	prior to the conclusion of	and at hourly intervals thereafter, including one pressul f each flow period. 7-day tests: immediately prior to th each flow period (at approximately the midway point) a	e beginning of each			
Division in writing of the exact time the	test is to be commenced. Onset opera	nors shan also be so notified.	to the concl		. Other pressures may be taken as desired, or may be re				
 The packer leakage test shall comm 	nence when both zones of the dual con	pletion are shut-in for pressu	re with record	ing pressure gauges the a	res, throughout the entire test, shall be continuously me curacy of which must be checked at least twice, once a	at the beginning and			
stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.				once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.					
4 For Flow Tost Mail and Tost of	the dual normalation shaft he must see	nt the normal sets of to it		; iaken on the gas zone.					
 For Flow Test No. 1, one zone of t while the other zone remains shut-in. So 24 hours in the case of an oil well, Note 	uch test shall be continued for seven da	ays in the case of a gas well a	nd for	sults of the above-describ	ed tests shall be filed in triplicate within 15 days after co	ompletion of the			
24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.			test, Tests Northwest	test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated					
E Ballandi a sur ball Abl m		1 1 11 m		well as the flowing tempe	atures (gas zones only) and gravity and GOR (oil zones	only).			
 Following completion of Flow Test above. 	LINO. 1, the well shall again be shut-in,	in accordance with Paragrap	с п 5
