	NORT	HWEST NEWMEXICC) PACKER LEAKAGE	E TEST INSTRUCTIO	ONS	
1 A nacker leakage test shall be com	menced on each multiply completed wel	l within seven days after actu	ial 6 Flow 1	Fest No. 2 shall be conduc	ted even though no lea	k was indicated during Flow Test No. 1. Procedure
completion of the well, and annually the Such tests shall also be commenced on a	reafter as prescribed by the order author all multiple completions within seven day	izing the multiple completion s following recompletion ar	n. for Flow Te nd/or remain shut-		as for Flow Test No. 1	except that the previously produced zone shall
chemical or fracture treatment, and whe the tubing have been disturbed. Tests sl requested by the Division.			en	res for gas-zone tests mus	t be measured on each	zone with a deadweight pressure gauge at time
			intervals as intervals du	follows: 3 hours tests: imp ring the first hour thereof,	nediately prior to the b and at hourly intervals	eginning of each flow period, at fifteen-minute thereafter, including one pressure measurement
 At least 72 hours prior to the community Division in writing of the exact time the 			flow period	, at least one time during e	ach flow period (at ap	lay tests: immediately prior to the beginning of each proximately the midway point) and immediately prior be taken as desired, or may be requested on wells
2 The protor logicon test shall a	nanca ultan hoth souce of the dust	slation are chut in f	24-hou		res, throughout the ent	ire test, shall be continuously measured and recorde
stabilization. Both zones shall remain sh	The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure bilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided wever, that they need not remain shut-in more than seven days. bilization the treat of each test, with a deadweight pressure gauges. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required bilization. Both zones shall remain shut-in more than seven days.					
			-			

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note; if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
