	NOKI	INWEST NEWMEARC	FACKER LEARAOL	1231 INSTRUCT	0143			
 A packer leakage test shall be commenced on each multiply completed well within seven days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. 				6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain shut-in while the zone which was previously shut-in is produced.				
Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when			er or en					
requested by the Division.				7. Pressures for gas-zone tests must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each flow period, at fiften-minute intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement				
2. At least 72 hours prior to the comm Division in writing of the exact time the t	nencement of any packer leakage test, t test is to be commenced. Offset operat		immediately flow period,	prior to the conclusion at least one time during	of each flow period. 7-d each flow period (at ap	lay tests: immediately prior to the beginning of each proximately the midway point) and immediately prior		
		·· ·	which have	previously shown questi	onable test data.	be taken as desired, or may be requested on wells tire test, shall be continuously measured and recorded		
 The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided 			re with records once at the	with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual				
however, that they need not remain shut-	in more than seven days.			the recording gauge sha taken on the gas zone.	in the required on the oil :	zone only, with deadweight pressures as required		
4. For Flow Test No. 1, one zone of the while the other zone remains shut-in. Su	ch test shall be continued for seven da	ys in the case of a gas well an	d for		had a star of the star of the			
24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.			test. Tests	8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated				
C. Ballandara A.V. Con E.	NT- 1 Abs	ta anna da ser da ser da	thereon as w			and gravity and GOR (oil zones only).		
Following completion of Flow Test above.	No. 1, the well shall again be shut-in,	in accordance with Paragraph	د ۱
