	NOR	THWEST NEWMEXICC	) PACKER LEAKAGE	E TEST INSTRUCTI	ONS ·			
completion of the well, and annually Such tests shall also be commenced of chemical or fracture treatment, and w	ommenced on each multiply completed we thereafter as prescribed by the order author on all multiple completions within seven da whenever remedial work has been done on schall also be taken at any time that comp	rizing the multiple completion as following recompletion ar a well during which the packet	n. for Flow Te nd/or remain shut- er or	st No. 2 is to be the same		was indicated during Flow Test No. 1. Procedure xeept that the previously produced zone shall roduced.		
<ul> <li>the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division.</li> <li>At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.</li> </ul>				7. Pressures for gas-zone tests must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each flow period, at fifteen-minute intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement immediately prior to the conclusion of each flow period. 7-day tests: immediately prior to the beginning of each flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells which have previously shown questionable test data.				
	mmence when both zones of the dual com n shut-in until the well-head pressure in ea hut-in more than seven days.		24-hou re with record once at the completion,	ir oil zone tests: all press ing pressure gauges the a end of each test, with a d	ares, throughout the entire couracy of which must be cadweight pressure gauge	e test, shall be continuously measured and recorded checked at least twice, once at the beginning and . If a well is a gas-oil or an oil-gas dual me only, with deadweight pressures as required		

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

 $\ensuremath{\$}$  . Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
