Describe Cause of Problem and Remedial Action Taken.\*

The 2" fuel line to the compressor had a pin hole leak found on 4/10/2013. The compressor was immediately shut down and the location blew down. Telemetry was used to determine the duration of the release from 4/1 - 4/10. The calculation was completed on 4/22/13 and resulted in 300mcf of Fruitland Coal natural gas being released. Along with the natural gas was 15gal of produced water and 15gal of lube oil.

Describe Area Affected and Cleanup Action Taken.\*

The impacted soil was removed and transported to an approved disposal facility and remaining soil was treated in place. The fuel line was replaced and the well will be turned on when possible. No further action will be taken.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
