Describe Cause of Problem and Remedial Action Taken.*

The flowline running from the well head to the separator, which is about half a mile long, sprung a leak. The well head and separator were shut in and blown down.

Describe Area Affected and Cleanup Action Taken.*

The oil and water ran about 40 ft. down a dry wash running next to the flow line. The oil and contaminated soil were removed and Envirotech sampled the area. Most of the area passed, one section of sandstone did not. We raked the sandstone with the backhoe and left to air out until we fix the pipeline. We will test again when we dig up flowline to fix leak.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
