Describe Cause of Problem and Remedial Action Taken.*

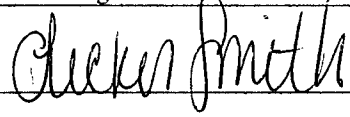

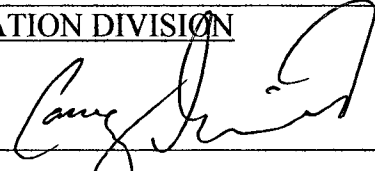

Swedge between tank and drain valve failed allowing for 20 BBL of crude oil to be released from oil tank line. Well was shut in upon discovery to stop further release. Released fluids were vac'd from impervious lined containment.

Spill ranks "0" according to NMOCD Spill and Remediation Guideline, August 13, 1993

Describe Area Affected and Cleanup Action Taken.

All crude oil was confined to impervious containment. Containment is a steel, lined firewall.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
