		HWEST NEWMEXICO	PACKER LEAKAGE	TEST INSTRUCTIO	NS .				
 A packer leakage test shall be common completion of the well, and annually ther Such tests shall also be commenced on al chemical or fracture treatment, and when the tubing have been disturbed. Tests sharequested by the Division. At least 72 hours prior to the common Division in writing of the exact time the test. The packer leakage test shall common stabilization. Both zones shall remain shuthowever, that they need not remain shuthowever. 	eafter as prescribed by the order author I multiple completions within seven day ever remedial work has been done on a all also be taken at any time that comm encement of any packer leakage test, th est is to be commenced. Offset operate ence when both zones of the dual comp ut-in until the well-head pressure in eac in more than seven days.	izing the multiple completion. ys following recompletion and u well during which the packer unication is suspected or when he operator shall notify the ors shall also be so notified. Solution are shut-in for pressure h has stabilized, provided	for Flow Tes or 7. Pressur intervals as f intervals dur immediately flow period, to the concle which have p 24-hou with recordit once at the e completion, above being	 Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain shut-in while the zone which was previously shut-in is produced. Pressures for gas-zone tests must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each flow period, at fifteen-minute intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement immediately prior to the conclusion of each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period at at. 24-hour oil zone tests: all pressures throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone. 					
4. For Flow Test No. 1, one zone of the while the other zone remains shut-in. Su 24 hours in the case of an oil well. Note: atmosphere due to lack of a pipeline control of a pipeline control of the statement	ch test shall be continued for seven day if, on an initial packer leakage test, a g	in the case of a gas well and gas well is being flowed to the	for 8. The res test. Tests s Northwest N	8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).					

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.
