	NOR	THWEST NEWMEXICO	PACKER LEAKAGE	TEST INSTRUCTI	ONS			
1. A packer leakage test shall be comp completion of the well, and annually the	eafter as prescribed by the order autho	orizing the multiple completion	n. for Flow Te	st No. 2 is to be the same	e as for Flow Test No	leak was indicated during Flow Test No. 1. Procedure o. 1 except that the previously produced zone shall		
Such tests shall also be commenced on a chemical or fracture treatment, and when the tubing have been disturbed. Tests sh	never remedial work has been done on	a well during which the packe	r or	in while the zone which	was previously shut-	in is produced.		
requested by the Division.	an also de taken at any time mai comi	initiation is suspected of whe	Pressur			ach zone with a deadweight pressure gauge at time be beginning of each flow period, at fifteen-minute		
	nencement of any packer leakage test, t		intervals dur immediately	ing the first hour thereof prior to the conclusion of	, and at hourly intervolution of each flow period.	vals thereafter, including one pressure measurement 7-day tests: immediately prior to the beginning of each		
Division in writing of the exact time the	test is to be commenced. Offset opera	tors shall also be so notified.	to the conclu		l. Other pressures m	approximately the midway point) and immediately prior ay be taken as desired, or may be requested on wells		
 The packer leakage test shall comm 	nence when both zones of the dual com	pletion are shut-in for pressur	e with recordi	r oil zone tests: all press ng pressure gauges the a	ures, throughout the ccuracy of which mu	entire test, shall be continuously measured and recorded ist be checked at least twice, once at the beginning and		
stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.			once at the e completion,	once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.				
4. For Flow Test No. 1, one zone of t	he dual completion shall be produced a	at the normal rate of productio						
while the other zone remains shut-in. Su 24 hours in the case of an oil well. Note	ich test shall be continued for seven da i: if, on an initial packer leakage test, a	ys in the case of a gas well and gas well is being flowed to the	d for e 8.
