D		THWEST NEWMEXICC) PACKER LEAKAGE	E TEST INSTRUCTIO	NS
 A packer leakage test shall be com completion of the well, and annually the Such tests shall also be commenced on a 	reafter as prescribed by the order autho	rizing the multiple completion	n. for Flow Te	st No. 2 is to be the same	ed even though no leak was indicated during Flow Test No. 1. Procedure as for Flow Test No. 1 except that the previously produced zone shall as previously shut-in is produced.
chemical or fracture treatment, and whe the tubing have been disturbed. Tests si	never remedial work has been done on a	a well during which the packe	er or		
requested by the Division.			 Pressue intervals as 	follows: 3 hours tests: imm	t be measured on each zone with a deadweight pressure gauge at time nediately prior to the beginning of each flow period, at fifteen-minute
	mencement of any packer leakage test, t		immediately	prior to the conclusion of	and at hourly intervals thereafter, including one pressure measurement each flow period. 7-day tests: immediately prior to the beginning of each each flow period (at enrouting the midure period) and immediate hereit
Division in writing of the exact time the	test is to be commenced. Offset operat	ors shall also be so notified.	to the concl		ach flow period (at approximately the midway point) and immediately pric Other pressures may be taken as desired, or may be requested on wells able test data
 The packer leakage test shall common shall common shall common shall common shall common shall common shall be shall	nence when both zones of the dual com	pletion are shut-in for pressur	24-hou	r oil zone tests: all pressu	res, throughout the entire test, shall be continuously measured and records curacy of which must be checked at least twice, once at the beginning and
 The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days. 			once at the	end of each test, with a dea	adweight pressure gauge. If a well is a gas-oil or an oil-gas dual be required on the oil zone only, with deadweight pressures as required

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).

above being taken on the gas zone.
