		THWEST NEWMEXICO) PACKER LEAKAGI	E TEST INSTRUCTI	ONS		
1. A packer leakage test shall be con	nmenced on each multiply completed we	ll within seven days after act	ual 6. Flow 7	Fest No. 2 shall be condu	cted even though no le	ak was indicated during Flow Test No. 1. Procedure	
Such tests shall also be commenced on	ereafter as prescribed by the order author all multiple completions within seven da	ys following recompletion a	nd/or remain shut	est No. 2 is to be the sam -in while the zone which		1 except that the previously produced zone shall is produced.	
	enever remedial work has been done on shall also be taken at any time that comm		en	ires for gas-zone tests mi	ist be measured on eac	h zone with a deadweight pressure gauge at time	
			intervals as intervals du	7. Pressures for gas-zone tests must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each flow period, at fifteen-minute intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement			
	umencement of any packer leakage test, t e test is to be commenced. Offset opera		flow period	, at least one time during	each flow period (at a	-day tests: immediately prior to the beginning of each pproximately the midway point) and immediately prior y be taken as desired, or may be requested on wells	
			which have	previously shown question	onable test data.	ntire test, shall be continuously measured and recorded	
stabilization. Both zones shall remain s	The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure tabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided non-ear the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required to the recording gauge shall be required to not be old accounted by the deadweight pressure shall remain shut-in until the well-head pressure in each has stabilized, provided to the recording gauge shall be required on only, with deadweight pressures as required to the recording pressure gauges the source at the ord of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on only, with deadweight pressures as required to the recording gauge shall be required to the oil zone only.						
however, that they need not remain shu	owever, that they need not remain shut-in more than seven days.						

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
