DIS	TRICT #3 NORT	THWEST NEWMEXICO	PACKER LEAKAGE	E TEST INSTRUCTIO	NS			
 A packer leakage test shall be common completion of the well, and annually the Such tests shall also be commenced on a 	reafter as prescribed by the order autho	rizing the multiple completion	for Flow Te	6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain shut-in while the zone which was previously shut-in is produced.				
chemical or fracture treatment, and when the tubing have been disturbed. Tests sh			n	6	1			
requested by the Division.			intervals as	follows: 3 hours tests: imr	nediately prior to the beg	ne with a deadweight pressure gauge at time inning of each flow period, at fifteen-minute ereafter, including one pressure measurement		
2. At least 72 hours prior to the comm Division in writing of the exact time the			immediately flow period,	prior to the conclusion of at least one time during e	each flow period. 7-day ach flow period (at appro	tests: immediately prior to the beginning of each eximately the midway point) and immediately prior		
			which have	previously shown question	able test data.	taken as desired, or may be requested on wells test, shall be continuously measured and recorded		
3. The packer leakage test shall comm stabilization. Both zones shall remain sh			e with recordi once at the	ng pressure gauges the ac end of each test, with a de	curacy of which must be adweight pressure gauge	checked at least twice, once at the beginning and If a well is a gas-oil or an oil-gas dual		
however, that they need not remain shut-				the recording gauge shall taken on the gas zone.	be required on the oil zo	ne only, with deadweight pressures as required		

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packet leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

4

Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 5 above.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
