	DISTRICT #3	THWEST NEWMEXICO) PACKER LEAKAGI	E TEST INSTRUCTIO	DNS	
1. A packer leakage test shall be com	menced on each multiply completed we	ell within seven days after actu	ual 6. Flow 7	Fest No. 2 shall be conduc	ted even though no leak	was indicated during Flow Test No. 1. Procedure
completion of the well, and annually the Such tests shall also be commenced on a chemical or fracture treatment, and when	reafter as prescribed by the order author all multiple completions within seven da never remedial work has been done on	prizing the multiple completion ays following recompletion a a well during which the pack	n. for Flow Te nd/or remain shut er or		as for Flow Test No. 1 e	except that the previously produced zone shall
the tubing have been disturbed. Tests sh requested by the Division.	aali also be taken at any time that comn	numication is suspected of wh	 Pressu intervals as 	follows: 3 hours tests: im	mediately prior to the beg	one with a deadweight pressure gauge at time ginning of each flow period, at fifteen-minute
 At least 72 hours prior to the comm Division in writing of the exact time the 			immediately flow period to the concl which have	y prior to the conclusion o , at least one time during lusion of each flow period previously shown questio	f each flow period. 7-da each flow period (at appr Other pressures may be nable test data.	hereafter, including one pressure measurement y tests: immediately prior to the beginning of each oximately the midway point) and immediately prior e taken as desired, or may be requested on wells
 The packer leakage test shall comn stabilization. Both zones shall remain sh however, that they need not remain shut 	nut-in until the well-head pressure in ea		with record once at the completion,	ing pressure gauges the ad end of each test, with a de	ccuracy of which must be eadweight pressure gauge	e test, shall be continuously measured and recorded checked at least twice, once at the beginning and e. If a well is a gas-oil or an oil-gas dual one only, with deadweight pressures as required

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
