NORTHWEST	NEWMEXICO	PACKERLEAKAG	E TEST INSTRUCTIO	INC
North West	THE WINE ALCO	TACKER LEAKAO	. itsi insikoerik	215
 A packer leakage test shall be commenced on each multiply completed well within so completion of the well, and annually thereafter as prescribed by the order authorizing the 	multiple completion	n. for Flow Te	st No. 2 is to be the same	ted even though no leak was indicated during Flow Test No. 1. Procedure as for Flow Test No. 1 except that the previously produced zone shall
Such tests shall also be commenced on all multiple completions within seven days followin chemical or fracture treatment, and whenever remedial work has been done on a well duri the tubing have been disturbed. Tests shall also be taken at any time that communication	ing which the packe	er or	-in while the zone which w	vas previously shut-in is produced.
requested by the Division.	is suspected of win	7. Pressu		t be measured on each zone with a deadweight pressure gauge at time nediately prior to the beginning of each flow period, at fifteen-minute
2. At least 72 hours prior to the commencement of any packer leakage test, the operator	or shall notify the	intervals du	ring the first hour thereof,	and at hourly intervals thereafter, including one pressure measurement f each flow period. 7-day tests: immediately prior to the beginning of each
Division in writing of the exact time the test is to be commenced. Offset operators shall a		to the concl	usion of each flow period.	each flow period (at approximately the midway point) and immediately prior Other pressures may be taken as desired, or may be requested on wells
		24-ho		res, throughout the entire test, shall be continuously measured and recorded
The packer leakage test shall commence when both zones of the dual completion are stabilization. Both zones shall remain shut-in until the well-head pressure in each has stab		once at the	end of each test, with a de	curacy of which must be checked at least twice, once at the beginning and adweight pressure gauge. If a well is a gas-oil or an oil-gas dual be presided to the site of the second sec
however, that they need not remain shut-in more than seven days.			the recording gauge shall taken on the gas zone.	be required on the oil zone only, with deadweight pressures as required
 For Flow Test No. 1, one zone of the dual completion shall be produced at the norm while the other zone remains shut-in. Such test shall be continued for seven days in the cr 				
24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is atmosphere due to lack of a pipeline connection the flow period shall be three hours.		e 8. The re		ed tests shall be filed in triplicate within 15 days after completion of the cc District Office of the New Mexico Oil Conservation Division on
and the second s		Northwest	New Mexico Packer Leaks	age Test Form Revised 10-01-78 with all deadweight pressures indicated atures (gas zones only) and gravity and GOR (oil zones only).
			ten na me noring tempere	and es (Bas zones only) and Bravity and Cost (of zones only).
