Describe Cause of Problem and Remedial Action Taken.*

Water hauler discovered the overflow upon arriving on location. 40.3 bbls of produced water and overflown into the cribbing. 40bbls of fluid was recovered. The release was contained and did not leave location.

Describe Area Affected and Cleanup Action Taken.*

ConocoPhillips will assess the soil to determine a path forward for clean-up if necessary. On 08/22/16 a site visit confirmed that that cribbing area was sealed with a well intact and impermeable liner running under the Below Grade Tank and sealed at the edges by the cribbing. This liner and seal allowed the total recovery of the produced water released in 2014. No further remediation is required.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
