		THWEST NEWMEXICO	PACKER LEAKAGE	TEST INSTRUCTIO	NS	
<ol> <li>A packer leakage test shall be com completion of the well, and annually the Such tests shall also be commenced on a chemical or fracture treatment, and whe the tubing have been disturbed. Tests si requested by the Division.</li> </ol>	reafter as prescribed by the order autho all multiple completions within seven da never remedial work has been done on	rizing the multiple completion ys following recompletion an a well during which the packe	I. for Flow Te: d/or remain shut- r or n 7. Pressur intervals as f	st No. 2 is to be the same in while the zone which w res for gas-zone tests mus follows: 3 hours tests: imm	as for Flow Test No. 1 as previously shut-in is be measured on each a mediately prior to the be	zone with a deadweight pressure gauge at time eginning of each flow period, at fifteen-minute
<ol> <li>At least 72 hours prior to the comp Division in writing of the exact time the</li> </ol>			immediately flow period, to the conclu which have p	prior to the conclusion of at least one time during e usion of each flow period. previously shown question	each flow period. 7-d ach flow period (at app Other pressures may b able test data.	thereafter, including one pressure measurement ay tests: immediately prior to the beginning of each oroximately the midway point) and immediately prior be taken as desired, or may be requested on wells ire test, shall be continuously measured and recorded
<ol> <li>The packer leakage test shall comr stabilization. Both zones shall remain sh however, that they need not remain shut</li> </ol>			e with recordin once at the e completion,	ng pressure gauges the ac end of each test, with a de	curacy of which must b adweight pressure gaug	e checked at least twice, once at the beginning and ge. If a well is a gas-oil or an oil-gas dual zone only, with deadweight pressures as required

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
