	District #3	THWEST NEWMEXICO	PACKER LEAKAGE	TEST INSTRUCTIO	NS		
<ol> <li>A packer leakage test shall be common completion of the well, and annually ther Such tests shall also be commenced on a hemical or fracture treatment, and when he tubing have been disturbed. Tests sh</li> </ol>	reafter as prescribed by the order author all multiple completions within seven day never remedial work has been done on a	rizing the multiple completion ys following recompletion an a well during which the packe	n. for Flow Tes d/or remain shut- r or	st No. 2 is to be the same a		indicated during Flow Test No. 1. Procedure t that the previously produced zone shall uced.	
equested by the Division. 2. At least 72 hours prior to the comm Division in writing of the exact time the	<ol> <li>Pressur intervals as f intervals dur immediately flow period, to the conclu- which have period.</li> </ol>	ollows: 3 hours tests: immuning the first hour thereof, a prior to the conclusion of d at least one time during ea sion of each flow period. previously shown questions	ediately prior to the beginnin and at hourly intervals therea each flow period. 7-day test ich flow period (at approxim Other pressures may be take able test data.	with a deadweight pressure gauge at time g of each flow period, at fifteen-minute ifter, including one pressure measurement is: immediately prior to the beginning of each iately the midway point) and immediately prior en as desired, or may be requested on wells t. shall be continuously measured and recorded			

24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorde with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided

however, that they need not remain shut-in more than seven days.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.
