	NORT	THWEST NEWMEXICO	PACKER LEAKAGE	TEST INSTRUCTIO	NS				
1 A packer leakage test shall be comp	nenced on each multiply completed we	Il within seven days after actu	al 6 Flow T	est No. 2 shall be conduct	ed even though no leak was i	indicated during Flow Test No. 1. Procedur			
 A packer leakage test shall be commenced on each multiply completed well within seven days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division. 			n. for Flow Tes d/or remain shut-	6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain shut-in while the zone which was previously shut-in is produced.					
			n						
			intervals as f	7. Pressures for gas-zone tests must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each flow period, at fifteen-minute intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement					
 At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified. 			immediately flow period,	prior to the conclusion of at least one time during ea	each flow period. 7-day test ach flow period (at approximation	s: immediately prior to the beginning of each ately the midway point) and immediately prior			
-			which have p	previously shown question	able test data.	en as desired, or may be requested on wells t, shall be continuously measured and recorde	ed		
 The packer leakage test shall comm stabilization. Both zones shall remain shi 			e with recordin	ng pressure gauges the acc	curacy of which must be chec	t, shall be continuously measured and records sked at least twice, once at the beginning and a well is a gas-oil or an oil-gas dual			
however, that they need not remain shut-			completion,			nly, with deadweight pressures as required			

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
