	District #3	3						
	NORT	THWEST NEWMEXICO	PACKER LEAKAGE	TEST INSTRUCTION	ONS			
1. A packer leakage test shall be comp completion of the well, and annually the	menced on each multiply completed we reafter as prescribed by the order autho					ak was indicated during Flow Test No. 1. Procedur I except that the previously produced zone shall	e	
Such tests shall also be commenced on a chemical or fracture treatment, and when	all multiple completions within seven da never remedial work has been done on a	a well during which the packer	d/or remain shut- r or	in while the zone which				
the tubing have been disturbed. Tests sh requested by the Division.	hall also be taken at any time that comm	nunication is suspected or when	7. Pressur			zone with a deadweight pressure gauge at time beginning of each flow period, at fifteen-minute		
2. At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the			intervals dur	ing the first hour thereof	, and at hourly intervals	s thereafter, including one pressure measurement day tests: immediately prior to the beginning of each	h	
Division in writing of the exact time the			flow period, to the conclu	at least one time during usion of each flow period	each flow period (at ap . Other pressures may	proximately the midway point) and immediately pri be taken as desired, or may be requested on wells		
			24-hou		ures, throughout the en	tire test, shall be continuously measured and record		
 The packer leakage test shall comm stabilization. Both zones shall remain sh however, that they need not remain shut 	once at the e	end of each test, with a de	eadweight pressure gau	be checked at least twice, once at the beginning and ge. If a well is a gas-oil or an oil-gas dual zone only, with deadweight pressures as required	L			
however, that they need not remain shut		taken on the gas zone.	e required on the off	action only, with dead weight pressures as required				

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

e .e

r

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
