Thomas,

We heard back from our pipeline group and they said that they are currently using the Culpepper Martin 8S ground bed to protect the Culpepper Martin 8A.

Please let us know if we need to do anything further.

Thank you,
Mandi

Mandi,

The above named well was plugged in Dec 2015. We received the C-103 final abandonment and inspected area. I spoke with Dollie about the well sign and cathodic well still on location. The sign has been removed but the cathodic well is still on location. Can you check into this and let me know what you find out. Location is ready to release with the exception of the cathodic well. If you have any questions please contact me.

Thank you
Thomas Vermersch
