Oil Conservation Division

Northwest New Mexico Packer-Leakage Test

Operator Hilcorp Energy Company			Leas	Lease Name SAN JUAN 28-7 UNIT				Well No.	8A		
Location of Well:	Unit Letter	1	Sec	18	Тwp	028N	Rge	007W	API #	30-039-2220	9

	Name of Reservoir or Pool	Type of Prod	Method of Prod	Prod Medium
Upper Completion	PC	Gas	Flow	Casing
Lower Completion	MV	Gas	Artificial Lift	Tubing

Pre-Flow Shut-In Pressure Data

Upper	Hour, Date, Shut-In	Length of Time Shut-In	SI Press. PSIG	Stabilized?(Yes or No)	
Completion	6/8/2018	96 hours	197	Yes	
Lower	Hour, Date, Shut-In	Length of Time Shut-In	SI Press. PSIG	Stabilized?(Yes or No)	
Completion	6/8/2018	179 hours	77	Yes	

Flow Test No. 1

Commenced at:	6/12/2018	Zone Producing (Upper or Lower): UPPER				
Time	Lapsed Time	PRES	PRESSURE			
(date/time)	Since*	Upper zone	Lower zone	Temperature	Remarks	
6/13/2018 11:01 AM	35	48	77	90	Upper Completion has been flowing for 24Hr.	
6/14/2018 11:00 AM	59	51	77	93	Upper Completion has been flowing for 48Hr.	
6/15/2018 11:00 AM	83	49	77	85	Upper Completion has been flowing for 72Hr.	

Production rate during test

Oil:	BPOD Based on:	Bbls. In	Hrs.	Grav.	GOR	
	-					

Gas MCFPD; Test thru (Orifice or Meter)

Mid-Test Shut-In Pressure Data

Upper Completion	Hour, Date, Shut-In	Length of Time Shut-In	SI Press. PSIG	Stabilized?(Yes or No)
Lower Completion	Hour, Date, Shut-In	Length of Time Shut-In	SI Press. PSIG	Stabilized?(Yes or No)

	NORT	HWEST NEWMEXICO	PACKER LEAKAGE	TEST INSTRUCTION	S			
 A packer leakage test shall be comm 	nenced on each multiply complete f1	within seven days after	al 6 Ela 7	art No. 7 chall he and wated	even though no leak was indicated during Flow Test No. 1. Procedure			
completion of the well, and annually there such tests shall also be commenced on al	izing the multiple completion	. for Flow Tes	t No. 2 is to be the same as :	for Flow Test No. 1 except that the previously produced zone shall previously shut-in is produced.				
chemical or fracture treatment, and when	ever remedial work has been done on a	well during which the packer	ror	it while the zone which was	previously shar-m is produced.			
the tubing have been disturbed. Tests sha requested by the Division.	au aiso oe taken at any time mat commi	initiation is suspected of when	Pressure		measured on each zone with a deadweight pressure gauge at time			
			intervals duri	ng the first hour thereof, and	iately prior to the beginning of each flow period, at fifteen-minute I at hourly intervals thereafter, including one pressure measurement			
. At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the ivision in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.			flow period,	immediately prior to the conclusion of each flow period. 7-day tests: immediately prior to the beginning of each flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells				

3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.

.

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

which have previously shown questionable test data. 24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
