13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.

DJR Operating, LLC is requesting to install a temporary flare on the North Alamito Unit L34 pad as a contingency for potential O2 excursions as we bring both the North Alamito Unit 306H, 307H, 308H wells back on line that are currently shut-in waiting on offset completion activities. The equipment that we plan to install on the L34 pad will include a flowback flare and a vertical knock-out separator. The flare will be located in a reclaimed area on the end of the pad and at a safe distance from the access and any facility equipment. Measurement of the flared volumes will be measured and recorded using existing gas meters on each separator. Gas will be manually sampled at each separator meter run to evaluate oxygen content. The natural gas production rate estimated to flare from this well is 664 Mcf/d. DJR plans to remove all temporary flare equipment by August 13, 2019.
