| | NOR | THWEST NEWMEXICO | PACKER LEAKAGI | E TEST INSTRUCTIONS | | | |
| A packer leakage test shall be con | mmenced on each multiply completed we | ll within seven days after actu | al 6 Flow 1 | Fest No. 2 shall be conducted e | ven though no leak was indicated during Flow Test No. 1. Procedure | | |
| completion of the well, and annually th | hereafter as prescribed by the order author all multiple completions within seven da | rizing the multiple completion | for Flow Te | 6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain shut-in while the zone which was previously shut-in is produced. | | | |
| chemical or fracture treatment, and wh | nenever remedial work has been done on shall also be taken at any time that comm | a well during which the packe | r or | | | | |
| requested by the Division. | | | Pressu intervals as | 7. Pressures for gas-zone tests must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each flow period, at fifteen-minute | | | |
| | nmencement of any packer leakage test, 1 | | immediately | prior to the conclusion of eacl | at hourly intervals thereafter, including one pressure measurement flow period. 7-day tests: immediately prior to the beginning of each | | |
| Division in writing of the exact time th | te test is to be commenced. Offset opera | tors shall also be so notified. | low period, at least one time during each flow period (at approximately the midway point) and immediately prior o the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells which have previously chosen questionable test data. | | | | |

24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days. completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).

Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.
